

CONCRETE CLOTH™ DITCH LINING CASE STUDIES

12.08.10 Case Study : RSSC Canal Lining Trial, Swaziland

In August 2010, Concrete Canvas SA conducted a canal lining trial in Mhlume, Swaziland, using Concrete Cloth (CC). Four layers of CC4 were laid in position and stapled together at the base before compressing the joints with sandbags. A strip of PVC, 100mm wide was removed from the backing, to create a concrete bond between adjacent layers.

The work to repair the 40m section of the canal took three hours to complete, vastly quicker and more effective than conventional lining techniques.
